

DATA & MORE DLP · REAL-TIME DATA LOSS PREVENTION FOR MICROSOFT 365

# Data & More | DLP

Don't send the **wrong message**.

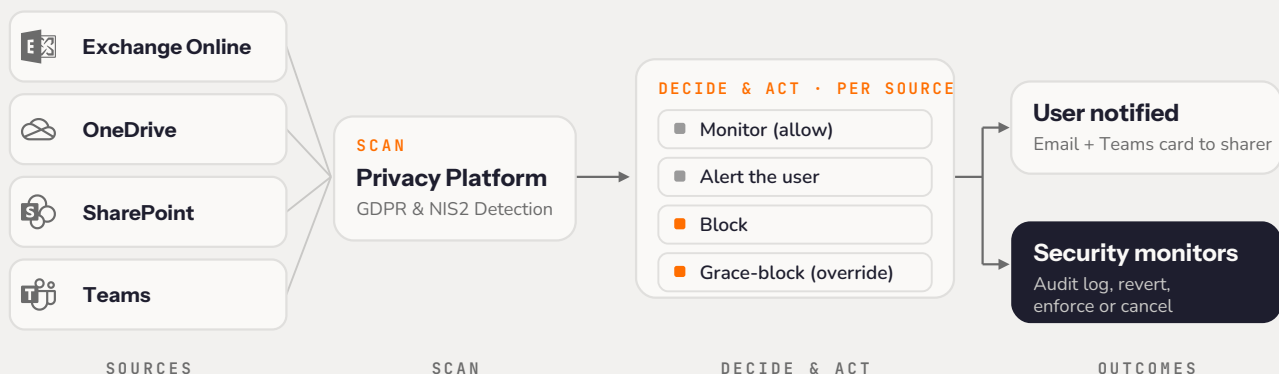

Data & More DLP watches the content your people share across Microsoft 365 and steps in the moment something sensitive is about to reach the wrong place. It works **in real time, inside the tools your teams already use**, so personal and confidential data is caught as it moves, not weeks later in an audit.

WORKS ACROSS	DETECTS	RESPONDS	FOOTPRINT
Exchange · OneDrive · SharePoint · Teams	GDPR & NIS2 Data at Risk	Monitor · Alert · Block · Grace- block	Native M365, no agent

## HOW IT WORKS

### One engine across every Microsoft 365 channel

Every email, file, and message is checked against the same Data & More profiling engine that powers our risk assessment, then handled by the policy you set, per source and per type of document.

01

## Covers every M365 channel

One service watches **Exchange Online email, OneDrive and SharePoint files, and Teams messages**. It runs natively in your Microsoft 365 tenant, with nothing to install on devices.

02

## Responds the way you choose

Set the response per source and per type of document: **monitor** quietly, **alert** the user, **block** outright, or **grace-block**, which holds enforcement for a set window so a human can override before it takes effect.

03

## People informed, security in control

The person sharing risky content is notified instantly by **email and Teams**. Security gets a full **audit trail** of how sensitive data spreads, and can revert, enforce, or cancel any pending action.

### WHY IT MATTERS

## Firewalls don't stop a leak. Less data in motion does.

Access controls and firewalls don't stop a colleague forwarding the wrong file, or Copilot reading it. **Data & More DLP makes sure sensitive content never reaches the wrong place to begin with**, shrinking your exposure, your breach scope, and the effort behind every GDPR and NIS2 obligation, with a clear, auditable record.

You can't breach data that isn't there!

## See Data & More DLP on your own tenant.

Turn it on across Exchange, OneDrive, SharePoint and Teams, and watch real risk get caught in real time. Start by monitoring, tighten to blocking when you are ready.
